

Keeping Healthy

A healthy child has the opportunity to be more successful in school and in all activities. There are many health habits you can teach your child now that will impact his/her present and future health. The single most important health practice is **handwashing**.

Most experts agree that the single most effective practice that prevents the spread of germs is good handwashing. Some activities in particular expose children and adults to germs or the opportunity to spread them. You can stop the spread of germs by washing your hands and teaching children good handwashing practices.

When Hands Should be Washed:

- Immediately before and after preparing and eating food.
- After using the toilet.
- After working.
- After shopping.
- After playing on the playground.
- After handling pets, pet cages, or other pet objects.
- Whenever hands are visibly dirty.

How to Wash Hands

- Always use warm, running water and a mild, preferably liquid, soap. Antibacterial soaps may be used, but are not required. Premoistened cleansing towelettes do not effectively clean hands and do not take the place of handwashing.
- Wet the hands and apply a small amount (dime to quarter size) of liquid soap to hands.
- Rub hands together vigorously until a soapy lather appears and continue for at least 15 seconds. Be sure to scrub between fingers, under fingernails, and around the tops and palms of the hands.
- Rinse hands under warm running water. Leave the water running while drying hands.
- Dry hands with a clean, disposable (or single use) towel, being careful to avoid touching the faucet handles or towel holder with clean hands.
- Turn the faucet off using the towel as a barrier between your hands and the faucet handle.
- Discard the used towel in a trash can lined with a fluid-resistant (plastic) bag. Trash cans with foot-pedal operated lids are preferable.
- Consider using hand lotion to prevent chapping of hands. If using lotions, use liquids or tubes that can be squirted so that the hands do not have direct contact with container spout. Direct contact with the spout could contaminate the lotion inside the container.
- When assisting a child in handwashing, either hold the child (if an infant) or have the child stand on a safety step at a height at which the child's hands can hang freely under the running water. Assist the child in performing all of the above steps and then wash your own.
